

01. Cancer Basics

What is Cancer?

Cancer is a group of diseases in which abnormal cells grow and divide uncontrollably. These cells may invade nearby tissues and spread to other parts of the body through the blood or lymphatic system. This process is called metastasis.

Common Types

Breast cancer, Lung cancer, Colon cancer, Prostate cancer, Cervical cancer, Leukemia and other blood cancers.

Common Warning Signs

Unexplained weight loss, persistent fatigue, lumps or swelling, persistent cough, difficulty swallowing, unusual bleeding, changes in bowel or bladder habits, and persistent pain.

Risk Factors

Tobacco use, excessive alcohol consumption, obesity, physical inactivity, unhealthy diet, radiation exposure, certain infections (such as HPV and Hepatitis B), family history, and increasing age.

Prevention

Avoid tobacco, limit alcohol, maintain a healthy weight, exercise regularly, eat a balanced diet rich in fruits and vegetables, get recommended vaccinations, and participate in appropriate cancer screening.
